Investment objective & strategy

The Sygnia Health Innovation Global Equity Fund is a Global-Equity-General portfolio which seeks to deliver long term capital growth by investing at least 80% of its assets outside South Africa and at all times invest in a minimum of 80% of equities. The portfolio will invest in financially sound equity securities, preference shares which generate capital growth, property shares and property related assets, fixed income securities and asset in liquid form, whether such securities, instrument or assets are listed or unlisted financial instruments (derivatives).

Risk Profile

The portfolio represents Sygnia's best investment view on the optimal combination of securities required to achieve superior long-term returns at a reasonable level of risk at any time. The portfolio exploits the benefits of diversification and will change its exposure to different securities and sectors on an active basis, based on prevailing market conditions. The portfolio aims to achieve its investment objectives, whilst recognising that there will be significant short-term volatility and aims to protect capital over the medium to long term.

Who should Invest?

Investors seeking currency diversification and higher returns who are willing to tolerate higher volatility and aim to maximise capital accumulation over a longer-term time horizon through exposure to companies that are involved in transformative technologies.

Time Horizon

A minimum of 5 years.

Market Performance

Markets are up a roaring 13% in the first quarter of 2021 but with such a swift rally, the question of a bubble arises. Unfortunately, a market bubble is a phenomenon best identified with hindsight. Having said that, there are bubble characteristics that you can watch out for, such as exponential price movement, extreme valuations, retail leverage and a "this-time-its-different" investment case. Looking at price action, the only truly exponential moves seem to be linked to digital innovation and ESG. Since 2014 cryptocurrencies have risen by a factor of 160, innovation stocks are up six times, special purpose acquisition companies (SPACs) and solar energy have tripled while European renewables have doubled. A lot of this meteoric rise has happened in the last year and is most likely linked to extreme activity (relative to the past) in US retail trading. Fortunately, the recent price correction in this area has reduced some concerns.

Despite respite in most of the world, Central and Eastern Europe are currently being overrun by a third wave, forcing countries such as Italy, Estonia, and Hungary to introduce new lockdown restrictions. This comes at a time when vaccination rollout is struggling across the EU and is further complicated by developments regarding the AstraZeneca/Oxford vaccine, where the Netherlands, Ireland, Germany, Italy, Spain, Portugal and France suspended use of the vaccine over potential blood clotting concerns. AstraZeneca and the World Health Organisation (WHO) are denying reports that the vaccine is linked to blood clotting risks. Towards the end of the month Europe restarted AstraZeneca vaccines following a safety endorsement from the European Medicines Agency, but now the EU is threatening to stop exports of the vaccine from EU production facilities into the UK and ongoing bickering continues between EU countries over all vaccine allocations. South Africa has vaccinated just over 200 000 people. However, the South African government has not yet set up the required compensation to cover damage claims as the rollout is still part of a clinical trial; and incoming shipments of the Johnson & Johnson vaccines have been delayed.

In the month, Congress passed President Joe Biden's $1.9 trillion Covid relief bill - the second largest ever US fiscal stimulus package. This adds $1.9trn worth of fiscal stimulus on top of the $900bn already introduced by former president, Donald Trump, at the end of last year, bringing the total estimated combined fiscal support from these two packages to the significant amount of 13% of GDP.

Focus now turns to Biden's $2.25trn infrastructure package, a massive number. According to the Bureau of Economic Analysis, the current value of government fixed assets considered as infrastructure is about $6trn, so this represents about more than a third of the stock of fixed assets. Concerns are now being raised about inflation risks, given the huge amount of stimulus. Clearly the US has learned from Japan and is fighting tooth and nail to avoid deflation. In the short-term, inflation and US rates will certainly rise, but we maintain that this will be a one- or two-year event.

The biggest challenge facing advanced economies remains the weak rate of productivity growth. This is a result of several factors including:

- quantitative easing.
- low rates of business cost of capital which allows inefficient businesses to survive; and
- the failure of new "social media" digital technologies to feed through into productivity.

Remember that all stimulus is just stealing from the future. Biden is already planning the first major federal tax hike since 1993 to help pay for his long-term economic programme.

The tax changes in the infrastructure program will likely include repealing portions of Donald's 2017 tax law that benefitted corporations and wealthy individuals and making the tax code more progressive by providing relief for middle-class households. Taxes are low by historical standards. Biden's plan sees the corporate tax rate rising from 21% to 28%.

The South African economy contracted by 7.0% in 2020 from an increase of 0.2% in 2019. While this was better than expected, electricity generation continues to constrain growth. Load shedding continued unabated in March. Aside from Eskom's spiralling debt, fading sales, and ailing power stations, the utility faces another unsustainable predicament. There is a growing trend of serious allegations against executives from staff who have been taken to task for underperformance, with more than 3 686 of Eskom's 44 000 employees facing disciplinary proceedings.

South Africa announced preferred bidders to provide emergency power to prevent load shedding. The eight bidders - Acwa Power Project DA, Karpowership SA Coega/ Saldanha/ Richards Bay, Mulilo Total Coega, Mulilo Total, Hydra Storage, Oya Energy Hybrid Facility and Umoyilanga Energy - will provide a total of 1.8MW from various technologies to be connected to the grid by August 2022. There is some concern as a number of these projects are foreign-owned, expensive, and using dirty power. Turkish-owned Karpowership ships are anchored off our shores and produce power via Liquid Natural Gas while Acwa is a Saudi company. Black ownership for these projects is at 41%, according to Minister of Mineral Resources and Energy Minister, Gwede Mantashe. A pending request for proposals for procurement of an additional 2600MW for private power producers is expected to further boost energy supply. Pension funds will be able to invest in a number of these projects as part of the new Private Public Pension Infrastructure Programme. Draft regulation 28 has several shortcomings, and Sygnia has submitted feedback to National Treasury.

China's economic activity surged in the first two months of the year, exports soared 61% in dollar terms reflecting strong global demand and imports climbed 22.2% highlighting a divergence in the economy as demand for iron ore and crude slowed and imports of high-tech parts accelerated. China's 14th five-year plan has a dedicated section for tech development with the clear objective of self-reliance for the country. The plan lays out seven technology research areas of focus including artificial intelligence, quantum computing, semi-conductors, and space. Premier Li Keqiang said that China would increase research and development spending by more than 7% a year over the next four years, in pursuit of "major breakthroughs" in technology.

We've seen increased focus on regulation with China's antitrust regulator issuing fines against some of its largest tech giants including Tencent. Alibaba has been asked to dispose of its media assets. Alibaba, China's largest e-commerce operator, is planning to offer its bargains service on rival Tencent Holdings' WeChat platform in a major concession to regulators seeking to crack down on monopolies.

While Covid-19 is not quite done with us yet, the pace of events (and recovery) is picking up. Leaders the world over can be seen to be taking swift action to correct the plummets of 2020 by putting recovery plans into motion. From concrete steps locally to address South Africa's energy crisis to Biden's stimulus package and infrastructure plans in the US, to China's ambitious 14th five-year-plan– all point to concerted efforts to ease financial pressures by stimulating growth and pressing forward. How successful each of these initiatives will be remains to be seen (and a sigh of relief is not in order yet), the shoots of a global recovery are already breaking ground.

Fund Performance

The Sygnia Health Innovation Fund strengthened modestly in the first quarter of 2021 as equity markets across the globe moved positively on the back of better-than-expected stimulus and vaccine progress. The fund's exposure to companies set to benefit from growth and innovation in genomics, bioengineering and immunology was increased during the quarterly review. During the quarter, the rand weakened slightly.

The largest vaccine rollout in history picked up speed during the quarter, with over 700 million doses administered globally. Four of the fund's constituents have developed Covid-19 vaccines approved for use. Johnson & Johnson, the fund's largest holding, received a significant boost to confidence after its vaccine candidate received approval, while the Oxford/AstraZeneca vaccine rollout has been more troublesome, with some uncertainty around efficacy rates and repeated delivery shortfalls.

Important information to consider before investing

BALANCING RISK AND REWARD

Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily an indicator of future performance. Unit trusts are traded at the ruling price and are allowed to engage in borrowing and scrip lending. The Fund may be exposed to certain risks such as credit risk, where an issuer of a non-equity security may not be able to make interest payments or repay the capital, impacting the value of the Fund, as well as liquidity risk, this relates to the ability of the unit trust to trade out of a security held in the portfolio at or near to its fair value. This may impact on liquidity in the fund. Reinvestment of income is calculated on the actual amount distributed per participatory interest, using the exdividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date.

FEES

A schedule of fees and charges is available on request from Sygnia. Permissible deductions may include management fees, brokerage, STT, auditor's fees, bank charges and trustee fees. Sygnia does not provide advice and therefore does not charge advice fees.

WHAT IS THE TOTAL EXPENSE RATIO (TER)?

The total expense ratio (TER) is the annualised percentage of the fund's average assets under management that has been used to pay the fund's actual expenses over the past year. Transaction costs are a necessary cost in administering the fund and impact fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Since fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The TER and transaction costs cannot be determined accurately because of the short lifespan of the specific class of the Financial Product. Calculations are based on actual data where possible and best estimates where actual data is not available.

HOW ARE UNIT PRICES CALCULATED?

Unit prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio, including any income accruals and less any permissible deductions from the portfolio, divided by the number of units in issue. Forward pricing is used and fund valuations take place at approximately 15:00 each business day. Purchases and redemption requests must be received by the manager by 14:00 each business day to receive that day's price. The price shown is specific to this class. The fund size represents the portfolio size as a whole. Unit prices are updated by 10:00 every business day and are available on our website, www.sygnia.co.za.

DISCLAIMER

The fund may be closed to new investments at any time in order to be managed in accordance with its mandate. Sygnia Collective Investments RF (Pty) Ltd is incorporated and registered under the laws of South Africa and is registered under the Collective Investment Schemes Control Act, 2002 (Act No 45 of 2002). Sygnia Asset Management (Proprietary) Limited (FSP Registration No. 873), an authorised financial services provider, is the appointed investment manager of the fund. Sygnia Collective Investments RF (Pty) Ltd does not provide any guarantee with respect to the capital or return of the portfolio. Nothing in this minimum disclosure document will be considered to state or imply that the collective investment scheme or portfolio is suitable for a particular type of investor.

This document is for information purposes only and does not constitute or form any part of any offer to issue or sell, or any solicitation of any offer to subscribe for or purchase, any particular investment. Whilst reasonable care was taken in ensuring that the information contained in this document is accurate, Sygnia accepts no liability in respect of any damages and/or loss (whether direct or consequential) or expense of any nature which may be suffered as a result of reliance, directly or indirectly, on the information in this document.

Additional information such as fund prices, brochures, application forms and a schedule of fees and charges can be requested via admin@sfs.sygnia.co.za or 0860 794 642 (0860 SYGNIA).
